GUIDELINE GENIUS

1. Purpose of this Addendum

This addendum captures the **final alignment following recent discussions** and is intended to:

- Confirm agreed refinements to Phase 1 scope
- Maintain clarity on inclusions and boundaries
- Ensure controlled, predictable delivery without scope ambiguity

This document is to be read alongside the original **Phase 1 Commercial Proposal (unchanged)**.

2. Confirmed Scope Adjustments & Clarifications

2.1 AI / Chat Integration (Revised Approach)

- Use of third-party hosted AI solution (e.g. Open Assistant GPT / OpenAI-based)
- No custom RAG pipeline development in Phase 1
- Chat functionality will operate using a retrieval-based approach (document/context lookup from client-provided dataset)
- Responses will be guided by the provided dataset on a best-effort basis
- Feature to be treated as beta / experimental in Phase 1

Exclusions:

- Custom embeddings pipeline
 - Model fine-tuning or training on proprietary datasets
 - AI accuracy guarantees or clinical decision support
-

2.2 Session Types (Finalised)

- No open-ended sessions
- Only:
 - Untimed (fixed number of questions)
 - Timed (fixed number of questions)

This simplifies system behavior and improves stability.

2.3 UX Enhancements (Amboss-Inspired)

- UX patterns to be **inspired by leading platforms (e.g. Amboss)**
- Includes:
 - Question navigation panel
 - Status indicators (attempted, flagged, etc.)
 - Inline explanations

- Structured exam-like layout

Important Note: UX will follow modern exam-platform standards and best practices, **without replicating proprietary designs or systems.**

2.4 Session Reset Functionality

- Users can **reset progress selectively**
 - Reset will:
 - Clear attempt state
 - Retain overall statistics and performance history
-

2.5 WordPress & SaaS Integration (Extended)

- Continued integration between **WordPress (content)** and **SaaS app (functionality)**
- Includes:
 - a unified login system (SSO) with the SaaS platform as the authentication source, ensuring seamless access between WordPress and the application
 - Logical navigation between systems

Additional Capability:

- Admin can **publish questions as WordPress article drafts** from SaaS
 - One-way publishing (SaaS → WordPress)
-

2.6 Website Article Toggle (WordPress Layer)

- Support for **dual-version content (2 versions per article)**
- Simple toggle mechanism within WordPress

Clarification: The team is looking into it and will cover it within the existing WP support.

2.7 Question Interface Enhancement

- Option to **hide all answer choices by default**
 - Answers revealed via user-triggered toggle
-

3. Scope Balance & Engineering Approach

The above refinements introduce a combination of:

- Scope simplifications (removal of custom AI/RAG development)
- UX enhancements (exam-style interaction patterns)
- Minor integration extensions (WordPress and admin controls)

These have been **reviewed and balanced holistically** to ensure:

- Stability of Phase 1 delivery
 - Controlled engineering complexity
 - No compromise on core product quality
-

4. Commercial Alignment

As discussed, Bitvero Limited is extending:

- A **10% preferential adjustment** on the Phase 1 investment
- **Flexible payment milestones** to support initial rollout

This reflects a collaborative approach while maintaining delivery standards. Additional requests will be evaluated and quoted separately.

5. Next Steps

- Confirmation of alignment on this addendum
 - Final commercial sign-off
 - Project kickoff scheduling
 - Development commencement (target: early May 2026)
-
